

Enterprise Firewall Health Assessment

How we can help:

Sayers Enterprise Firewall Health Assessment provides a proactive approach to assess your firewall infrastructure. Organizations are struggling to keep up with the required expertise for ongoing maintenance and care of complex security environments, while at the same time reacting to more tactical business requirements. We will work with your team to obtain secure access to your firewall and management infrastructure. We will review and analyze the configuration, health and log data for vendor best practices and recommendations. A report card will be delivered highlighting areas of potential risks and optimization.

What you will receive:

A Report Card that reviews:

- ✓ Status and Recommendations
- ✓ High-Level Architecture
- ✓ Capacity & Performance
- ✓ Feature Enablement and Integration
- ✓ Operating Systems, Patches, Software and Features in-use
- ✓ Prominent Configuration
- ✓ Hardware/Software Lifecycle Review
