

BUSINESS CONTINUITY WORKSHOP FOR IT PROFESSIONALS

BUSINESS CONTINUITY AS AN IT PRACTICE

Business Continuity (BC) requires more than an infrastructure capable of providing fault tolerance and fail over. BC requires the alignment between all departments, organizational goals, and your technical capabilities in order to protect revenue, meet regulations, and preserve reputation.

WORKSHOP ATTENDEES WILL LEARN HOW TO:

Design BC policies and processes through collaboration with other business units

Collect and analyze data on which infrastructure components support various business activities

Make BC part of the IT organization's "DNA" by design

Adhere to best practices for implementing BC solutions into production environments

Architect BC solutions capable of handling disruptions ranging from isolated outages to complete Disaster Recovery (DR) scenarios

Verifying the organization's readiness for the unexpected through regular testing

Whether you're new to BC concepts or want to reevaluate your current processes, the BC Workshop is executed by certified experts and was designed to create total alignment between your people, processes, and technology.

**Protect Your Revenue, Meet Regulations, and Preserve
Reputation with Business Continuity**
