

Business Continuity Workshop for IT Professionals

BUSINESS CONTINUITY AS AN IT PRACTICE

Business Continuity (BC) requires more than infrastructure capable of providing fault tolerance and fail over. BC requires an alignment between an organization's business objectives and its technical capabilities in order to protect revenues, meet regulations, and preserve reputation.

WORKSHOP ATTENDEES WILL LEARN HOW TO:

Design BC policies and processes through collaboration with other business units

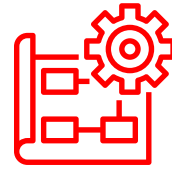

Make BC part of the IT organization's "DNA" by design

Collect and analyze data on which infrastructure components support various business activities

Architect BC solutions capable of handling disruptions ranging from isolated outages to complete Disaster Recovery (DR) scenarios

Adhere to best practices for implementing BC solutions into production environments

Verifying the organization's readiness for the unexpected through regular testing

Whether you are new to the concepts of BC, or simply seeking a refresher on current BC best practices, let Sayers Technology's staff of seasoned technical experts share their knowledge and personal experience in this informative and free workshop for customers.
