IGEL Endpoint POC Service

WHAT'S AN IGEL ENDPOINT?

Software-defined endpoint management security and optimization platform designed specifically for simple, secure, high-performance access to virtual desktops and cloud workspaces.

WHAT'S THE FREE POC SERVICE?

The free Proof of Concept (POC) Service is designed to provide clients the opportunity to test the IGEL Endpoint OS software and UMS (Management Suite). The POC will arm your team with the information needed to make a fully informed decision on your endpoint strategy. This includes:

1. Endpoint Industry Update

A Sayers expert will conduct a workshop for your team to review the endpoint solutions in the market. Gain an understanding how clients have leveraged IGEL technology to transform their client endpoint strategy.

2. Evaluate IGEL Endpoint OS and IGEL UMS (Management Suite)

See how IGEL works in your own environment or take advantage of the Sayers lab. Sayers can help your team deploy, test, tear-down, and repeat the process.

3. Migration Process

Understand your upgrade path from existing hardware to an IGEL platform. See the migration process first-hand.

4. Quantify ROI

If you need to build a business case, the POC will enable you to quantify the potential benefits and the return on investment offered by IGEL in partnership with Sayers Technology.
