

Data Center Transformation

Gartner anticipates that many leading enterprises will migrate entirely away from their on-premises data centers with the current trend of moving workloads to colocation, hosting and the cloud.

TACKLING THE INEVITABLE

The role of the corporate data center is changing rapidly. There is substantial motivation to move “everything” to the cloud. Organizations intuitively seek to place workloads where they are most effective in providing an agile, responsive infrastructure to their business. Sayers can help your business move to a more secure, repeatable, and elastic IT environment through our Hybrid Cloud Assessment. Sayers helps analyze, design, and implement solutions faster – freeing you and your team to focus on key business initiatives.

DISCOVER

- Determine application and server scope
- Discover requirements
- Perform interviews and workshops

DEPLOY

- Install toolsets
- Review all data and confirm

ASSESS

- Analyze – identify gaps; develop recommendations
- Create Road Map and workshops

MANAGE

- Create final report
- Executive presentation
